

# Cognitive Distortions for Teens

When we are feeling really worried, sad, angry, or overwhelmed, sometimes our brains can get stuck in certain “modes,” or ways of thinking. These are ways of thinking that aren’t *actually* true, but *feel* true in the moment. For example, if you make one mistake, your brain might go into All-or-Nothing Mode and think, “I’m bad at everything,” even though that is not true. When we can name these modes, it can be easier to pause and look at a situation from a new perspective. Here are six common modes and some examples of what they sound like.

## Fortune Teller Mode

Our brains are in fortune teller mode when they predict that the *worst* possible outcomes are going to happen in the future. This is also called “catastrophizing.”

*I think I failed my math test today. I’m probably going to flunk for the rest of the year. What if I have to repeat the whole grade?!*

## Mind Reader Mode

Our brains are in mind reader mode when they take guesses at what other people are thinking. However, our brains feel *really sure* that their guesses are right.

*My first day at my new school was awkward. I bet everyone else thinks I’m shy and weird. I bet none of them want to be friends.*

## All-or-Nothing Mode

Our brains are in all-or-nothing mode when they only see things in extremes. This is also called “black and white thinking.”

*If this audition doesn’t go well, then I’ll be a total failure at dance. It doesn’t matter that I was good at dance in the past.*

## All My Fault Mode

Our brains are in all my fault mode when they are *sure* something is all our fault, even if that’s not really true.

*I missed my friend’s text when he was upset. If I had answered, he would have felt better. So it’s my fault that he had a bad day.*

## I Should / I Must Mode

Our brains are in I should / I must mode when it seems like there are rigid rules about how you are always supposed to behave, with no room for mistakes.

*I can’t believe I dropped that pass. I should always give 100 percent. I can’t ever make a mistake.*

## Ignoring the Positive Mode

Our brains are in ignoring the positive mode when a mix of good, bad, and neutral things happen, but only the bad things seem to matter.

*My grades just got posted. It’s not important that I got my grade up in Science - my grade in Social Studies is still low.*

# Cognitive Distortions for Teens

To get more familiar with these concepts, draw a line to match the examples to each mode.

To be a good friend, I always have to be available. I can't miss anything.

1

It doesn't matter that I got chosen for a part in the play. I didn't get the lead role.

2

My classmate got detention. He must be a really bad person.

3

She didn't laugh at my joke. She must hate my sense of humor.

4

My teacher punished the whole class, but it's probably because I interrupted him.

5

I haven't made any friends yet. I won't in high school, or college, or ever.

6

A

## All-or-Nothing Mode

Black and white; no room for gray

B

## Mind Reader Mode

"Knowing" what someone is thinking

C

## Ignoring the Positive Mode

When only bad things seem to matter

D

## Fortune Teller Mode

Predicting the worst future outcome

E

## All My Fault Mode

Being sure something is your fault

F

## I Should / I Must Mode

Rigid rules about what you have to do

Answers: 1=F, 2=F, 3=C, 4=A, 5=B, 6=D

Are you experiencing a cognitive distortion? Write down your thought below.

.....

.....

Which cognitive distortion does the thought match? Why?

# Cognitive Distortions for Teens

If you are experiencing a cognitive distortion, you can practice looking at a situation in a new way. Use the ideas and examples below to try a new perspective.

Ask, what would you say if your best friend said this?

Focus on what you know in the present moment

Get more flexible by brainstorming “maybe”s

Balance the positives and negatives with “and”

<b>Mind Reader Mode</b> “Knowing” what someone is thinking	<i>She didn't laugh at my joke. She must hate my sense of humor.</i>	→	<i>Maybe she didn't like that joke or she's heard it before. Maybe she just has a different sense of humor from mine.</i>
<b>Ignoring the Positive Mode</b> When only bad things seem to matter	<i>It doesn't matter that I got chosen for a part in the play. I didn't get the lead role.</i>	→	<i>I didn't get the lead in the play - AND - I was the first choice for the role I did get.</i>
<b>Fortune Teller Mode</b> Predicting the worst future outcome	<i>I haven't made any friends yet. I won't in high school, or college, or ever.</i>	→	<i>Right now, I'm still working on making friends. I'm going to keep trying.</i>
<b>All My Fault Mode</b> Being sure something is your fault	<i>My teacher punished the whole class, but it's probably because I interrupted him.</i>	→	<i>Punishing the whole class for just your behavior would be really unfair. It was probably because of multiple students.</i>
<b>I Should / I Must Mode</b> Rigid rules about what you have to do	<i>To be a good friend, I always have to be available. I can't miss anything.</i>	→	<i>Everybody misses things sometimes. That doesn't mean you're a bad friend, just human!</i>
<b>All or Nothing Mode</b> Black and white; no room for gray	<i>My classmate got detention. He must be a really bad person.</i>	→	<i>Maybe he was just having a bad day. Maybe good kids can make mistakes. Maybe the teacher was being unfair.</i>

Try writing a new, more balanced thought to replace your distorted thought:
